

# CROPWEIGH

## AGRICULTURAL WEIGHING SYSTEMS

### HIGH-ACCURACY WEIGHING

**CROPWEIGH** is designed for high accuracy in rugged conditions and is the first choice for bulk transport applications; aggregates, quarries, feed delivery, bulk powder and many extreme off-road operations. It can be fitted to any type of tipper trailer. The high accuracy weigher manages overloads by measuring the payload, minimising damage to running gear, tyres and braking systems whilst helping operators to increase profits and protect investments. The optional body inclinometer offers greater tipping safety on uneven ground.

### BRITISH ENGINEERING

Manufactured with pride in Great Britain, our heavy duty loadcells made from high quality hardened steel and nickel plated to look good for years to come, are easily installed on new vehicles and equipment or retrofitted at any time. VWS load cells are made and tested to 15 tonnes each to quality standard ISO 9001:2000. The combination of high purity, machined to close tolerances and made from fully traceable back to the mill steel, VWS onboard loadcells are tough and we believe the best you can fit.

For added protection in harsh conditions, installation friendly automotive connectors are moulded onto the wiring cables to provide a quick connect alternative to hard wiring. For increased moisture protection, quality environmental sealing to marine standards keeps electricals dry.

### FEATURES

- Net, load, gross & axle weights
- High accuracy  $\pm 0.5\%$  fsd or better
- Overload alarm, audible or visual
- Installs on any tipper trailer
- Integrates with telematics and other connected systems
- Nationwide unrivalled on-site service

### DISPLAY

The simple to use M350S indicator for industrial trucks gives drivers precise weight information where and when it's required. Using a clear and bright organic LED, the clearest display available. The M350S is an easy-to-read, lightweight indicator, ideal for agricultural vehicles.
