

INTELLIGENT JUNCTION BOX

Taking the ease, accuracy and reliability of on board weighing to a new level. Vehicle Weighing Solutions (VWS) and Applied Weighing have proudly produced Great Britain's most sophisticated and robust underbody load cell weigh systems. For the past 25 years, we've been proud to supply a diverse market, with reliable products and exceptional service.

Now, with the launch of the newly developed INTELLIGENT JUNCTION BOX, we can provide smart and remote fault diagnosis to ensure problems are rectified quickly and efficiently, with minimum impact on your operation. The INTELLIGENT JUNCTION BOX is a comprehensive diagnostic tool, used to indicate the functionality of active load cells and load cell cables.

In the rare event of a fault occurring, the system pin points the exact diagnosis, enabling the appropriate remedial action to be taken and fixes to be completed easier and quicker; saving time and money.

The system will enter "limp mode", should a load cell fail and the system will automatically re-calibrate itself across the remaining cells, so that you can keep weighing until it is fixed.

The INTELLIGENT JUNCTION BOX is incredibly easy to calibrate - your truck arrives with the weigher already working and calibrated!

Furthermore, the INTELLIGENT JUNCTION BOX is packed with standard features such as an inclinometer and on-screen weight indicator. The M350s display is user-friendly, making a vehicles status easy to keep track of on its clear LED screen, we can output to all major tracking and telematics devices.

KEY FEATURES

Comprehensive diagnostic tool

Simple calibration

Aids accountability in the case of driver neglect

Remote diagnostics = first time fix
